

Pan & Tilt (Hydraulic)

HLK-2150, for Work-Class ROVs

Model HLK-2150 pan/tilt has had tremendous success and still is most widely used Pan/tilt on work-class ROVs due to its reliability, smooth movements and precise handling of the video cameras and lights on ROVs.

The HLK-2150 is designed to be rugged and user friendly. Its unique design of hydraulic connections enables the use of rigid pipes instead of moving hoses, and keeps the area of operation free of any interference while the video cameras are panned or tilted. It has the smallest arc of pan of any other Pan/Tilt unit available today.

HLK-2150 is constructed from 316 stainless steel and HE30 aluminum.

Features

- Exceptional Reliability
- No Moving Hoses during operation
- Body machined from solid metal
- Rugged
- Precise positioning control
